Affordable Housing Repiping Without Displacement

Poly B & Kitec Replacement for BC Housing Authorities & Low-Income Properties

Hero Section (Above the fold)

Keep Tenants in Their Homes. Protect Your Budget. Eliminate Risk.

At Plumbing Track, we understand the unique pressures facing BC Housing Authorities and non-profit providers: aging Poly B and Kitec systems, tight budgets, tenant safety, and the constant challenge of minimizing disruption.

Our **patented Plumbing Track System** delivers modern, code-compliant repiping with **zero need for tenants to move out** — making it the smartest choice for occupied affordable housing across British Columbia.

Why Housing Authorities Choose Plumbing Track (Core Section)

1. No One Has to Move Out

Traditional repiping forces weeks or months of relocation, hotel stays, and massive tenant disruption. With the Plumbing Track System, residents stay in their units for the entire project. Life goes on as normal — no packing, no temporary housing costs, and no lost rental income for you.

2. No Dust. No Mess. Minimal Disruption

Our surface-mounted track system installs along ceilings and corridors like modern crown molding. We avoid opening walls and ceilings in living spaces, which means:

- Dramatically reduced dust and debris
- Faster project timelines
- Happier tenants and fewer complaints
- Lower cleaning and restoration costs

3. No Ceiling Damage — and a Major Asbestos Advantage

Many older BC affordable housing buildings contain asbestos in ceilings and insulation. Traditional repiping often requires disturbing these materials, triggering expensive abatement, permits, and safety protocols.

Plumbing Track's non-invasive approach **minimizes or completely eliminates ceiling disturbance**, significantly reducing asbestos-related risks, costs, and regulatory hurdles. Safer for workers, tenants, and your organization.

Additional Benefits Built for Housing Authorities

- Future-proof, accessible piping — easy maintenance for decades to come
- Full turnkey service: assessment, planning, installation, and post-project support
- Proven results in occupied multifamily buildings across Western Canada
- Cost-effective and budget-friendly compared to conventional methods
- Minimal impact on daily operations and tenant quality of life

Trust-Building Section

“The Ultimate Low-Disruption Solution for Vulnerable Housing”

Testimonials / Case Studies (placeholder)

- “Plumbing Track allowed us to upgrade our 60-unit building with almost zero tenant complaints.” — BC Housing Provider
